brief bio

Josh Compton is Professor of Speech at Dartmouth College. He has authored more than 100 scholarly publications, many exploring what inoculation theory can tell us about communication in some unexpected places. His research has examined health messaging about nicotine vaping, conspiracy messaging, Stephen King adaptations, loyalty among fans of struggling hockey teams, and communication about stochastic terrorism. Much of his work focuses on health, politics, and education. He's discussed inoculation theory with audiences ranging from NATO officials to medievalists, and especially enjoys conversations and collaborations that take the theory in directions he hadn't anticipated.
